## **Bittel USA Unveils 58 Series Guestroom Telephone**

**(Roseville, Calif., May 13, 2009)** – Bittel USA, a leading provider of guestroom telephones, is proud to announce the addition of the 58 series to its broad range of unique, feature-rich phones that are specifically designed to meet the needs of the hospitality industry.

Built with the most modern technology, the 58 series has a stylish design that is unlike the standard guestroom telephone. Its rounded shape, elongated faceplate and curved handset are sure to spruce up the look of any hotel room.

The 58 series not only offers a modern look, but also Bittel's patented features. *Never-Off* is a busy dial tone disconnect and reset feature that disconnects the line from an accidental off-hook condition and, after a time delay, resets the phone to accept incoming calls; *Safe-Redial* provides convenient last number redial storage with the added security of automatic number deletion after a configured time delay; and the *No-Hook Hook Switch* enhances the maintenance free and functional performance capabilities of the telephone.

All of Bittel USA's products are industry certified and also come Alive on Arrival, meaning that a greater percentage of its phones are pre-tested on the factory floor than other manufacturers.

"As a progressive company, Bittel USA is always implementing new products," said Lennart Thornros, president of Bittel USA, which is a preferred vendor for several major hotel brands. "We are interested in meeting the needs of the market, and have done so with the 58 series, which received a tremendous response during its debut at BITAC last month."

In business since 1989, Bittel Electronics of China is the largest guestroom telephone manufacturer in the world. By centralizing the design, development and manufacturing of its product line in one location, Bittel is able to provide the highest quality guestroom telephones to the finest hotels worldwide.
